

Responsible Use of AI Checklist

Adopt human-centric approaches and establish clear goals

Understand the purpose of using AI. Treat AI as an assistive tool rather than a complete replacement for human intelligence and decision-making.

Always review AI outputs

Ensure human oversight and review of AI-generated outputs and prevent AI hallucinations.

Disclose the use of AI

Be transparent about the use of AI in any content or decision-making process, and clearly distinguish AI-generated outputs from human-created work to maintain accountability and trust.

Consider the privacy and security implications

Carefully evaluate the data privacy, security, and ethical implications when using AI systems. Implement robust governance and safeguards to protect sensitive information and prevent misuse or unintended consequences

Using AI for good and thinking of its impact on people

Prioritize the development and deployment of AI for socially beneficial purposes that uplift humanity, while proactively assessing and mitigating potential negative impacts on individuals, communities, and society at large.
