

AI Terminology Cheatsheet

Artificial Intelligence

AI is a broad field that aims to create **intelligent machines** capable of performing tasks that typically require human intelligence.

Machine Learning

Machine Learning is a subset of AI that enables systems to **learn and improve from experience without being explicitly programmed**.

Artificial Neural Network

Artificial Neural Networks are computational models inspired by the human brain, **consisting of interconnected nodes that process information in a way similar to neurons**.

Deep Learning

Deep Learning is a type of Machine Learning that **uses artificial neural networks with multiple layers** to learn from data in a hierarchical manner.

Generative AI

Gen-AIs are AI systems that **can generate new content such as text, images, audio, or code**, often by learning patterns from large datasets.

Large Language Models

LLMs are advanced AI systems **trained on vast amounts of text data** to understand, generate, and manipulate human-like language across a wide range of tasks.

Open-sourced AI

Open source AI refers to AI systems or models **whose code and algorithms are publicly available** and can be modified or distributed by anyone.

Close-sourced AI

Also known as proprietary AI, it refers to AI systems or models **whose code and algorithms are owned and controlled by a private entity**, typically a company, and are not publicly accessible.

Artificial General Intelligence

AGI refers to the hypothetical future development of **AI systems that can match or exceed human intelligence** across a wide range of cognitive tasks, rather than being narrow and specialized.

Artificial Narrow Intelligence

ANI refers to the current state of AI, **where systems are designed to perform specific, narrow tasks** and cannot generalize their intelligence to other domains

AI Wrappers

An AI Wrapper is **a software interface that allows non-technical users to interact with and utilize AI models** or systems without needing to understand the underlying code or algorithms.
